

DON'T JUST HOPE FOR THE BEST STROKE CARE MAKE IT POSSIBLE

WITHOUT PROPER CARE, A PATIENT'S STROKE SURVIVAL IS LEFT TO CHANCE

When **Matt** has a severe stroke, he is taken to the nearest hospital. When **Melissa** has a severe stroke, EMTs bring her to a Level 1 stroke center – a hospital that provides **neurointerventional care 24 hours a day, 7 days a week.**

Melissa will leave the hospital 4 days sooner than Matt and is twice as likely to be independent within 90 days. **Matt** is more likely to require long-term care and rehabilitation.

Matt may spend more than \$140,000 on care over his lifetime, while **Melissa** will save on care costs due to a shorter hospital stay and quicker recovery.

Melissa will likely live 5 years longer than **Matt** because she received neuroendovascular surgery soon after her stroke.
